EXPERIENCE

General Assembly, Boston, MA

Software Engineering Immersive Student

Completed a 12-week/ 480+ hour training program in full-stack web development where built 4 web applications, 3 individually and 1 in a team, utilizing industry best practices.

Featured projects:

Fyyur
- Developed a back-end for an app that artists and musical venues can use to find each other, and discover new music shows
Technologies used: Python, Flask, Flask-Migrate, SQLAlchemy ORM, PostgreSQL, Javascript

ExpTracker
- Created a full-stack single-page application aimed to help users to keep track of their expenses
- Built a custom API that orders all expenses by categories and filters them by date
Technologies used: React, JSX, Bootstrap, Ruby on Rails

Survey Builder
- Collaborated with three web-developers to create an app utilizing agile scrum methodology
- Built an application that allows users to create custom surveys and collect responses
Technologies used: JavaScript, jQuery, HTML, Bootstrap, Express, MongoDB, GitHub project board

My Dining List
- Developed a full-stack single-page application allowing users to create personal list of dining spots
- Built Rails API with CRUD capabilities
Technologies used: JavaScript, jQuery, HTML, CSS, Bootstrap, Ruby on Rails

Tic-Tac-Toe
- Created a browser-based game for a single player with user authentication
- Wrote a custom game engine, used AJAX for interacting with a third party API
Technologies used: JavaScript, jQuery, HTML, CSS, Bootstrap
